

## Read Me First

*for the HP ProCurve Manager, Version 1.5*

To install PCM+, simply insert the product CD into the CD ROM drive in the computer that you want to use for your network management station. The program will auto install. If, for whatever reason, the auto install doesn't work, run the **Install.bat** program from the CD ROM drive.

During an upgrade installation the PCM installer will migrate configurations currently stored in the PCM 1.0 database to the new 1.5 database. However, the existing policies in 1.0, which may contain a mix of settings for STP, Community Names, etc., will be divided into a single policy for each type, since the policies in PCM 1.5 are single-purpose.

---

### **Saving the Configuration Before Installing a New Version:**

Before initiating the installation process, it is recommended that you back up the PCM/server/db/solid.db database file. This will allow you to restore the previous version if necessary.

For details on installing and licensing HP ProCurve Manager, refer to *HP ProCurve Manager Getting Started Guide*, that came with your software CD.

---

### **Performing a Fresh Install on a System with PCM 1.0**

If you are installing PCM 1.5 on a system running PCM 1.0 with patch 1.0a, and you would like a clean installation, (you do not want to save the PCM 1.0 database or configuration), please use the following procedure:

1. Run the "RemovePatch.bat" file, provided on the HP ProCurve Manager v1.5 CD.
2. Uninstall PCM 1.0 using the Windows "Add/Remove Programs" utility.
3. Manually delete the Hewlett-Packard/PNM directory.
4. Run the install.bat
