

Read Me First

for ProCurve Manager, Version 2.0

To install PCM, PCM+, or IDM, simply insert the product disc into the CD ROM or DVD drive on the computer that you want to use for your network management station. The program will auto install. If, for whatever reason, the auto install does not work, run the **install.exe** program from the CD.

Before you Install

You must have version 1.5, or 1.6 of PCM+ installed prior to installing an upgrade version of PCM+ 2.0. To continue using PCM+ 2.0 beyond the 30-day free trial, contact your HP sales representative to purchase a PCM+ license.

NOTE: Once you install PCM or PCM+ Version 2.0, you can not revert to the previously installed version. If you are uncertain if you want to upgrade to the 2.0 Version, it is best to install it on a system that does not have any earlier versions of PCM or PCM+ installed.

Saving the Configuration Before Installing a New Version

During an upgrade installation (on a box that has PCM 1.5 or 1.6 installed) the PCM installer will launch a DB migration tool that will migrate configurations currently stored in the PCM database to the new 2.0 version database. This includes: policies, custom groups, users, devices, VLANs, and topologies. However, the existing policies in 1.5 or 1.6 versions, which may contain a mix of settings for STP, Community Names, Authorized Managers, and Trap Receivers, will be divided into a single policy for each type since the policies in PCM version 2.0 (or newer) are single-purpose.

When upgrading from PCM version 1.5 or 1.6 to a higher version, back up the **PNM\server\db\solid.db database** file before beginning the installation wizard. This lets you back out to the previous version if necessary and prevents the existing database from being lost or corrupted during database migration.
